For **Windows** users:
1. Open: Windows(zip)---- dist(folder)-------deri-yf-----(click with right mouse) run as administrator
2. Please do not delete other documents in the folder

For **Mac** users:
1. Change the permissions in "Security & Privacy" settings: Open System Preferences and click on "Security & Privacy." In the "General" tab, you will see the message that the application was blocked from opening. Next to it, there should be an "Open Anyway" button. Click on it and enter your administrator password to allow the file to open.
2. Change the permissions in "Security & Privacy" settings: Open System Preferences and click on "Security & Privacy." In the "Privacy" tab, you will see a tab named"Developer tools". In the left corner, there should be a "Lock" button. Click on it and enter your administrator password to allow the file to open, then click the terminal to allow it to run software locally.
3. Open: Mac(zip)---- dist(folder)-------deri-yf-----(click with right mouse) open with------ terminal
4. Please do not delete other documents in the folder

The Screen should be looked like this：
